IDENTIFIERS	District of Columbia; New York; North Carolina

ABSTRACT

The classroom environment is a factor in the instructional process and student performance. In this 60-minute videotape, acoustics, energy, education, and building design experts discuss alternative solutions and ideas used in new school construction and renovation projects. Schools in New York, North Carolina, and Washington, DC, that have been renovated or newly built, are profiled to demonstrate the results of building with the intention to address the challenges of more complex education curricula.
